

# Motherboards + Daughterboards

What to know about our Combination Kit

As Google continues to provide updates to ChromeOS, a variety of models are experiencing **increased compatibility errors** when a motherboard or daughterboard is being replaced. The good news is if you purchase a motherboard for one of these models, we have a solution. **Combination kits are now available** for any model that requires a motherboard to be matched with a compatible daughterboard.

## *So, what does this mean for your school or organization?*

- When purchasing a motherboard from AGParts, we will include the compatible daughterboard.
- By replacing both at the same time, this will ensure proper device functionality.
